

Plugging into the Future: An Exploration of Electricity Consumption Patterns

1. Introduction

Consumption pattern of energy shows the percentage use of different sources (solar energy, wind energy, geothermal energy, biogas, and tidal power). The consumption pattern of energy changes over time. Commercial sources of energy: Commercial energy makes up about 65% of the total energy consumed in India. During 2021-22, the per capita electricity consumption in India is 945.98 kilowatt-hour (Kwh). According to the official data the total installed capacity of the country stood at 4,12,212 MW, as on Feb. 2023.

2. Empathy Map

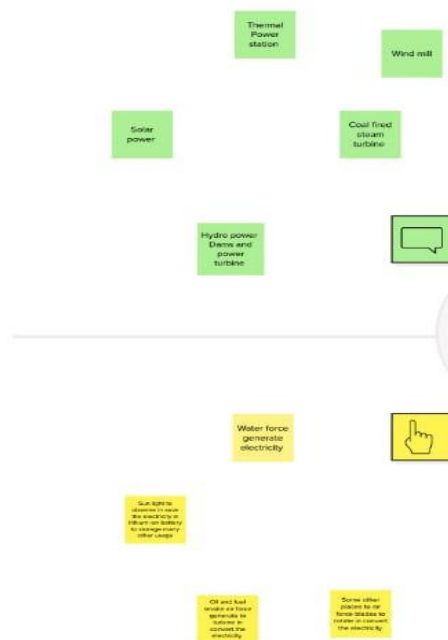

Build empathy

The information you add here should be representative of the observations and research you've done about your users.

Says

What have we heard them say?
What can we imagine them saying?

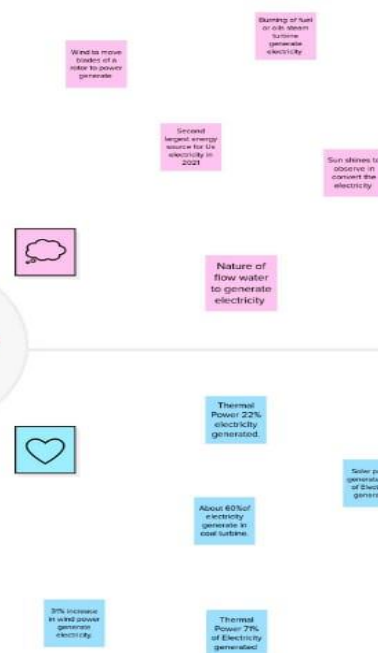

Does

What behavior have we observed?
What can we imagine them doing?

Thinks

What are their wants, needs, hopes, and dreams? What other thoughts might influence their behavior?

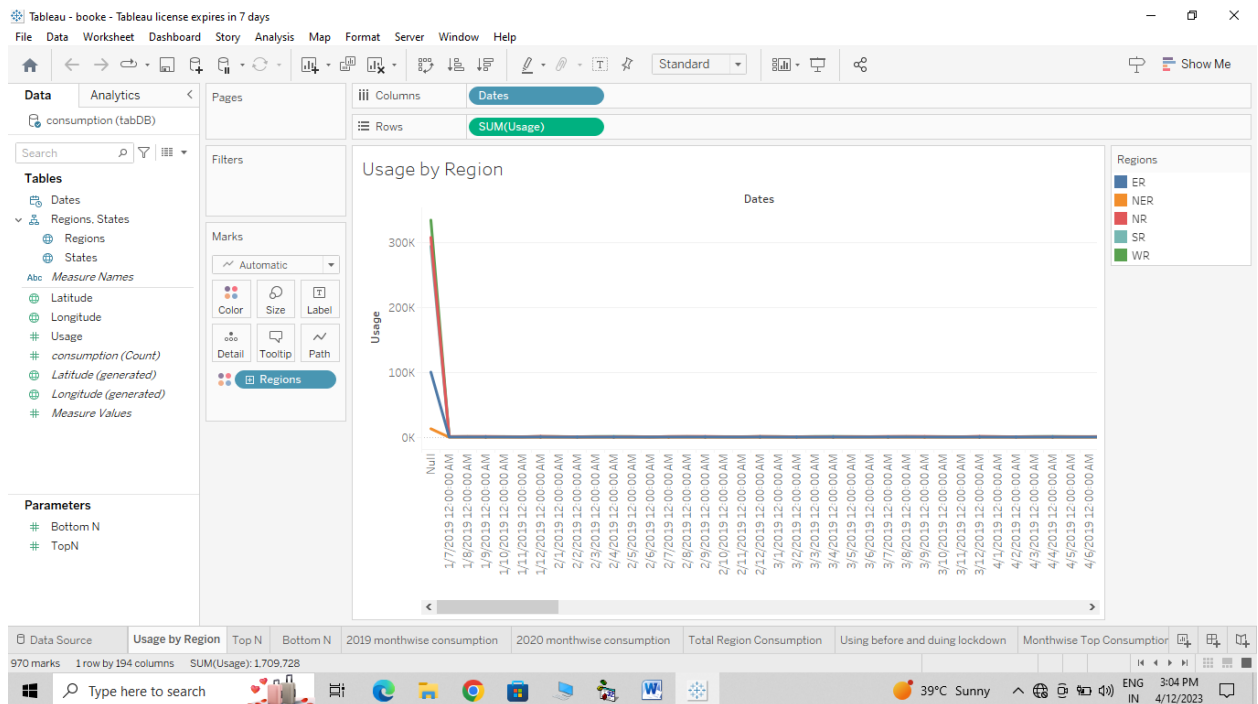

Feels

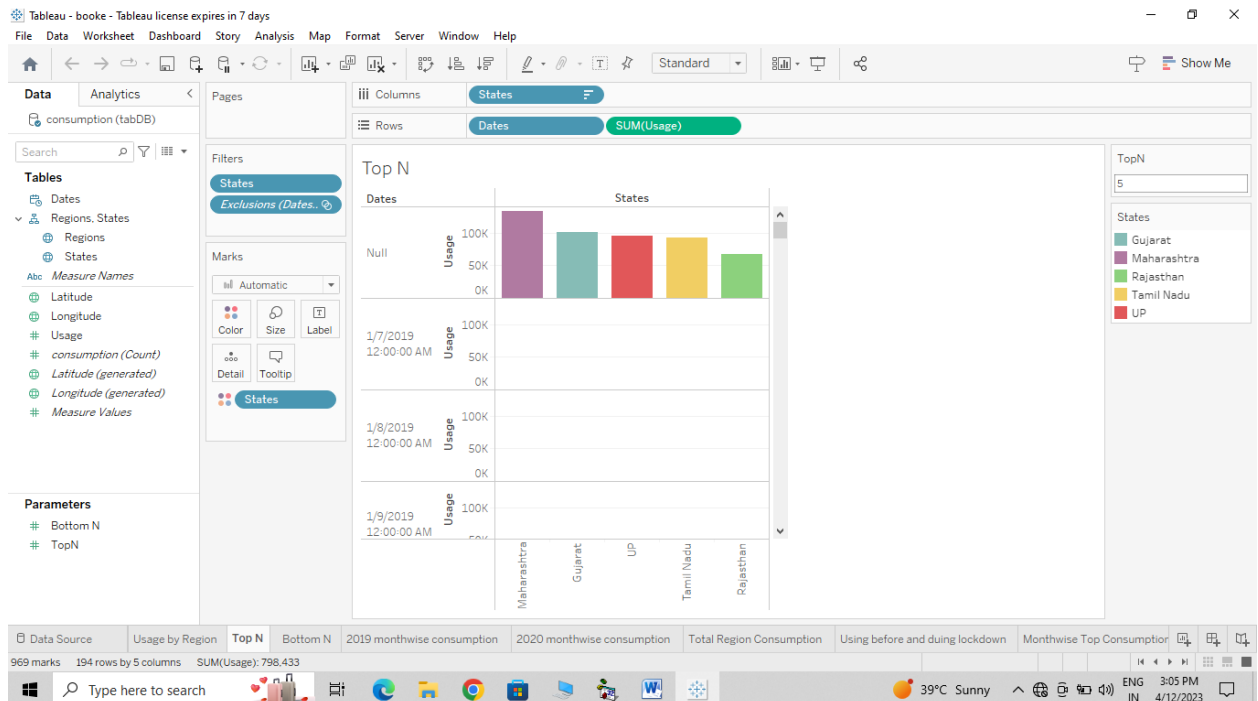

What are their fears, frustrations, and anxieties? What other feelings might influence their behavior?

The chart displays a single data series representing usage over time. The Y-axis is labeled 'Usage' and ranges from 0K to 300K in increments of 100K. The X-axis is labeled 'Dates' and shows dates from 1/8/20 to 5/6/20. The data shows a very high initial usage spike in early January 2020, peaking at nearly 300K, followed by a sharp drop to near zero by mid-February, and then remaining consistently low through May 2020.

Conclusion

Current through a given area of a conductor is the net charge that passes per unit time through the conductor. To keep up a gradual current, we must have a circuit within which an electrical phenomenon occurs from lower to higher mechanical energy. Energy conservation, in addition to lowering energy costs, can benefit the environment in a variety of ways. For starters, energy conservation can protect the environment by reducing resource consumption and carbon dioxide emissions. Following that, energy conservation can reduce the need for new power plants. Electric energy consumption is the form of energy consumption that uses electrical energy. Electric energy consumption is the actual energy demand made on existing electricity supply for transportation, residential, industrial, commercial, and other miscellaneous purposes. Annual electricity consumption per capita serves as an important measure of a country's electric power development. Generally speaking, electricity consumption grows faster when the industrialization process develops quickly and goes down rapidly when industrialization is completed or near completion.
